

## Sunlife - THE NEW SOLAR BUSINESS

### Energy and Solar Technologies:

Personalised study and construction of solar installations  
(for families and organisations)

Solar energy represents a profession of the future requiring the development of new conceptual approaches as well as design and construction..... *Sunlife offers the possibility of realising your projects whilst deploying profiles and highly qualified, multi-disciplinary human resources.*

Study and construction of solar power-stations  
(production of electricity and supply of food- processing industry with the help of solar energy)

*Sunlife* accumulates a large experience in the domain of construction of industrial solar power stations with the support of innovative and efficient technologies..... it will guide you towards a sound choice for the assembly of your projects "equipment - partners - market - financing".

R & D and advanced solar energy engineering  
(development of adaptive and innovative solutions)

It makes more sense to innovate within the research for technical solar solutions, when one explores their application within the domains close to our daily needs with grounds for development, *Sunlife takes you to a new world of applied R&D.*
